Professional Summary

Software Development Engineer with 3+ years of experience in designing, developing, and maintaining applications, seeking a role to build next-generation networking services like PrivateLink and VPC Lattice. Skilled in API integration, containerized frameworks, and cloud services, with a strong focus on service performance, durability, cost, and security. Proven ability to work independently and collaboratively to deliver innovative software solutions within agile methodologies.

Experience

Equitable Life of Canada (Co-op) Technology Specialist

Waterloo, ON
May 2024 – Aug. 2024

- Built responsive components for the Advisor Digital Portal using Angular, Redux, .NET, and Material UI, optimizing user experiences for insurance advisors and supporting over \$1B in annual policy sales.
- Streamlined AWS deployments and CI/CD pipelines, reducing release time by 40% and enabling faster rollout of digital solutions for insurance products and services, ensuring high availability and secure digital account management by configuring multi-region cloud services and monitoring systems.
- Automated batch processes and configured multi-region cloud services to ensure 99.99% uptime and secure digital account management for 1,000+ insurance advisors.
- Collaborated with cross-functional teams to deliver secure, compliant fintech and insurance solutions, contributing to a 29% year-over-year increase in premiums and policy deposits.

Experion Technologies Software Engineer

Kochi, India
Dec. 2021 – July 2023

- Led feature delivery across mobility and travel platforms for clients like **Maserati, Stellantis, and Backroads**, using React JS, Next JS, Angular, React Native, HTML5 and CSS; improved delivery speed by 30%, resulting in a 15% reduction in project costs for Maserati through reusable component libraries and implemented cross-platform design patterns to streamline consistency.
- Developed and maintained scalable web-based applications, integrating secure API development and utilization using Node.js, Express.js, .Net, PostgreSQL and MongoDB with token-based auth; reduced client-server integration issues by 40%.
- Integrated **SSO authentication** for secure access, collaborated cross-functionally with designers and QA to meet business needs, and contributed to agile sprint planning and cross-team reviews, following agile methodologies.
- Deployed apps using containerized frameworks (Docker) on Azure Cloud with CI/CD pipelines, integrating static and dynamic code analysis tools (SonarQube) into DevOps workflows for automated linting and quality checks; achieved 99.9% uptime and reduced manual deployment efforts by 50%.
- Mentored junior developers and interns on React JS, Angular, Node JS, .Net, API design, and Agile workflows; fostered a high-performance team culture through knowledge sharing and code walkthroughs.

Coderythm Technologies Software Tester

Kozhikode, India
June 2020 – Sep. 2021

- Executed manual and automated test plans for RESTful APIs and frontend functionalities, ensuring application reliability.
- Wrote and verified unit tests for MERN stack applications using Jest and Mocha, improving code quality and test coverage.
- Developed, maintained, and tested web pages using WordPress and other CMS platforms, gaining practical experience in content management, site customization, and user-centric web development.

Education

Conestoga College

Diploma in Applied AI & Machine Learning, Distinction (3.68 CGPA)

Waterloo, ON
Sept. 2024 – Apr. 2025

- Developed AI solutions using Python, TensorFlow, and PyTorch, focusing on Small Language Models (SLMs), Model Context Protocol (MCP), and Retrieval-Augmented Generation (RAG) techniques.

- Integrated React-based web applications with Large Language Models (LLMs) such as OpenAI and Gemini, enabling real-time AI-powered user interactions and chat features.
- Explored agentic AI systems and applied ethical AI practices, emphasizing fairness, data privacy, and compliance.

Conestoga College

Diploma in Computer Application Development, High Distinction (3.93 CGPA)

Waterloo, ON
Sept. 2023 – Aug. 2024

- Developed Progressive Web Apps (PWAs) and integrated voice search optimization to enhance user accessibility.
- Built full-stack applications using .NET 8, Node.js, React 19, and React Native, emphasizing component-based architecture and state management with Redux Toolkit and Context API.
- Implemented CI/CD pipelines with GitHub Actions and Docker, ensuring secure and efficient deployments.

Dr. APJ Abdul Kalam Technological University

Bachelor of Technology in Electronics & Communication Engineering

Thrissur, India
Aug. 2015 – July 2019

- Finalist in Idea Day Hackathon; developed embedded systems using C/C++ and ARM Cortex-M microcontrollers.
- Designed and simulated digital circuits using Verilog and Xilinx Vivado for FPGA-based applications.
- Conducted research on signal processing techniques for wireless communication systems.

Skills

Frontend: JavaScript (ES6+), TypeScript, React JS, Next JS, Angular, HTML5 and CSS, Responsive Design, Webpack, Tailwind CSS, Material UI, API integration (REST, GraphQL), Accessibility (WCAG, ARIA), Performance Optimization (lazy loading, memoization, code splitting)

Backend: C#, ASP.NET Core, Node.js, Express.js, RESTful APIs, Secure Coding, Performance Optimization

Cloud and DevOps: AWS (App Services, Functions, DevOps), Docker, Kubernetes, OpenShift, Terraform, BitBucket, GitHub Actions

Testing and Quality: xUnit, Jest, Selenium, Postman, Swagger, SonarQube

CMS: WordPress, basic familiarity with Agility CMS and SharePoint Development

Tools and Platforms: Visual Studio, VS Code, Git, Jira, Figma

Development Practices: SDLC, Agile/Scrum, OOPS, Clean Code, Code Reviews, TDD, Design Patterns, SSO integration

Networking: TCP/IP, DNS, HTTP, Subnetting, Routing, Firewalls, Wireshark

Soft Skills: Collaboration, Communication, Problem Solving, Adaptability, Continuous Learning, Operational Excellence

Projects

BurnLog (2025) – Developed a fitness PWA with React JS, Next JS, Supabase, and Prisma; implemented reusable components, Authentication, and CI/CD via Vercel, focusing on service performance and durability.

Lanify AI (2025) – Built a Flask-based microservice for real-time lane detection using CNN with React JS and google maps API; containerized using Docker and integrated with monitoring tools (Grafana), addressing challenges related to scaling and reliability.

Fluffnest (2024) – Designed and deployed an eCommerce application with Nuxt.js, TypeScript, Tailwind CSS, Stripe and i18n; implemented secure checkout, multilingual Support, LLM and API integrations, improving cost efficiency through optimized resource utilization.

Resumeow (2025) – Developed an ATS-optimized resume builder using React JS, TypeScript, Tailwind CSS, Firebase and Google's Gemini AI; implemented job description analysis, keyword extraction, LaTeX generation, and real-time ATS score tracking, making my job application tailoring speed 5 times faster.

Certifications

- Introduction to Containers, Kubernetes, and OpenShift, Docker Essentials, and Cloud Computing Certificates, IBM (2025)
- GitHub Foundations Certificate, GitHub (2025)
- Meta React and Front-End Developer Professional Certificate & React Native Specialization (2024)
- LinkedIn: Angular, Terraform, SQL, React, AI/ML Certifications (2023–2024)
- Google UX Design Professional Certificate (2021)
